

**Freedom of movement, the spirit.**

Since Movement Skis was created in the year 2000, the world has changed, mountains have changed, and skiing has evolved. Driven by a thirst for innovation and an independent production chain, Movement Skis is building the future of skiing. All of today's models unite freedom of movement with autonomy in the mountains. Skis which adapt to everything, from ski resorts to long-distance ski tours is Movement's mission. Reliable, versatile and efficient skis that love freedom, skis made for today's world.

**Natural movement, the expertise.**

Movement Skis has always followed its own path. Thanks to its unique production process, where everything from the first idea to the final construction all happen in its own manufacturing plant, and thanks to Swiss technical expertise, Movement has created highly technological skis at the forefront of innovation. This level of research is mirrored by the level of commitment in the mountains, and the need for trustworthy and versatile equipment which that implies, allowing Movement to stay ahead of the evolution of our sport.

The evolution of lifestyles and the powerful call of nature leads modern skiers to approach skiing in a more adventurous and sporty way. Our 22/23 collection meets this need with a 100% touring friendly offer.

*Make way for the ride. Sometimes, Movement Skis anticipates the movement. Sometimes, it embraces it. The important thing is to have good skis.*

# ALP TRACKS SERIES

unlimited freedom  
of movement

The ultimate experience of Movement agility, ALP TRACKS embodies the top of the range in high mountain skiing. A concentrate of technology, materials selected according to strict weight criteria for unlimited freedom of movement.

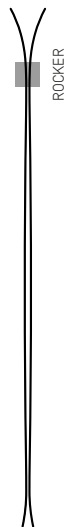

Agility, performance, modernity, ALP TRACKS materializes technological innovation for freeskiing. High-precision tuning redefines the equation between skiability and agility. The full carbon construction is dedicated to the summit hunters whose reward is best descent possible.

This season, the ALP TRACKS 85 and 85 W follow the geometric formula of their predecessors by lengthening their effective edge surface for better grip and, therefore, better safety in delicate passages. For heavy loads, the ALP TRACKS 98 makes its appearance and displays, like its 106 mm predecessor, a double rocker for freeride use. In other words, the agility of ALP TRACKS for big conditions and beautiful missions.

Modernized this season, the thinnest ski in the range has been given a new look by aligning itself with the geometry of the 90 and 95, i.e., a shortened heel in order to lengthen its effective edge length, to accentuate its efficiency, and to make it more secure. A formidable climber and a formidable descender, ultra-light and ultra-efficient, this full carbon ski with its specially selected paulownia core encourages you to head for the high mountains with the prospect of a controlled descent.

The ALP TRACKS 90 is a remarkable climber with exceptional skiability. Straight rim construction, front rocker, secure tail and an athletic shape to go on the mountain with skis that are manoeuvrable in narrow passages, reactive on hard snow and at ease in uneven and deep snow conditions. With 90 mm full carbon underfoot - a perfect compromise between manoeuvrability and lift - it embodies the new ALP TRACKS ski experience perfectly.

With 95 mm full carbon underfoot - a lift that will satisfy powder hunters - incomparable lightness and pleasure on the slopes are now inseparable. With its straight rim construction, front rocker, secure tail, and an athletic shape, this women's version differs from the unisex 95 by the positioning of the mounting points and a more flexible fiberglass. Designed for women skiers looking for a touring weapon on the way up and a powder-hungry ski for the descent, the 95 W embodies the ALP TRACKS experience with a special attraction to committed skiing.

# SESSION SERIES

natural movement  
of exploration

A touring ski ready for exploration, the SESSION is where performance and reliability converge for bold freedom of movement.

Powerful, rugged, lightweight. SESSION celebrates the adventurous side of touring. Infallible travel gear designed to chase slopes and peaks, far and near, with the same appetite. Movement is instinctive and SESSIONS are always exceptional.

New this season, the shape of the SESSION 85 and 85 W has been shortened in the heel and the effective edge surface has been lengthened for better grip and, therefore, better safety. This modernization follows the evolution of the SESSION range in straight rims.

# SESSION

**85**  
new

**SIZE 162**  
WIDTH 120/85/104  
RADIUS 16.5

An 85 width underfoot for speed touring performers. Both super light and with good floatability, it is a ski with a racing temperament and a shape adapted to beautiful downhill conditions thanks also to his light tip and tail rocker. This exceptional ski, on the borderline between performance on the way up and pleasure on the way down, has all the assets to become the everyday ski for those who eat up vertical.

# GO SERIES

the committed side  
 of movement

Pure freeride skis ready for any face, the GO range is for committed freedom of movement.

Free, committed, powerful. GO embodies a new dimension of freeride where the boundaries between uphill and downhill skiing are blurred. GO embodies the reign of freetouring, light, solid and unsinkable tools designed for high-density skiing. The movement is vertical, fluid, fast. The mountain is a canvas, the GO your brush.

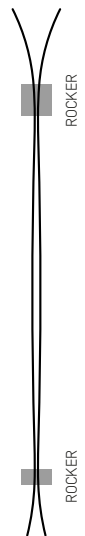

The range is enriched with the 112 mm GO, the largest GO model this season. This new model is made of paulownia wood like the 106 mm version. This wood species is particularly light and corresponds to their slope hunter temperament, close to the heart of Aurélien Ducroz. Freetouring weapons, ready to search and conquer the best freeride spots, whatever the conditions.

GO

90

**SIZE 162**

Ref **MOV-A-22007**

This season, Aurélien Ducroz's weapon will have a 112 cm underfoot and a load-bearing capacity intended, as you can imagine, for seasoned freeriders. Very light for its size, thanks to a paulownia wood construction, it is a freeride monster designed for the quest of big conditions. A very stable ski at high speed, with two long rockers to ride fresh snow with an immediate pivot. Its sidecut also allow it to drive well on hard snow or uneven snow. A ski designed for big challenges.

For women skiers looking for a freetouring ski, the GO 90W is made for freeriding. Whether it's on challenging couloirs, varied terrains, powder, or simply long tours, not forgetting the ski resorts where its aggressive temperament excels, the GO 90 W is a super versatile ski. Light, stable and very grippy with a paulownia wood and double titanal construction, the GO 90 W differs from the unisex version by the positioning of the mounting point and a more flexible fiberglass.

For women skiers who are looking for a freetouring ski for big conditions, the GO 98 W has all the qualities of a freeride ski that can move away from civilization. Agile, light and grippy, thanks to the combination of a paulownia wood and double titanal reinforcement, it differs from the GO 98 by the positioning of the mounting point and a more flexible fiberglass. With a classic camber and two progressive rockers at the extremities, this is a pure freeride ski that isn't afraid to go the distance to find powder.

The legendary GO 106 is now available in a women's version with a shifted mounting point and a more flexible fiberglass. Twice awarded best freeride ski of the year in its unisex version, the women's version benefits directly from the contribution of the paulownia wood to gain in lightness and facilitate the hunt for more distant summits. Reactive and grippy, thanks to its double titanal reinforcement, very reactive in big conditions, thanks to its two long rockers, the GO 106 W is a formidable freeride ski intended for all-mountain and big mountain freetouring use.

For those who want to learn freeriding and freetouring, the GO JUNIOR skis follow the characteristics of the adult range to accompany the youngest in learning to freeski. Lightweight, stable and very grippy, with a paulownia wood and triaxial fiberglass construction more suited to smaller riders than titanal, the GO JUNIOR are very responsive and very safe. Easy to ride, a dominant freeride character, and a light weight which calls to go freetouring, the ski domains and their surroundings will be the beginning of a lifelong experience.

# FLY SERIES

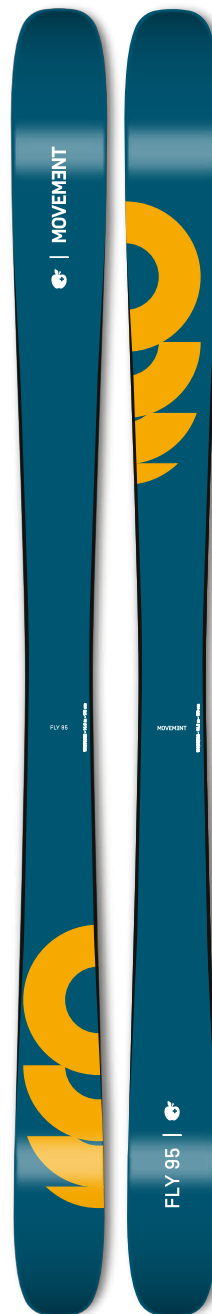

upcoming  
revolutionary  
movement

Creative and playful, the FLY range is designed for aesthetic and aerial freedom of movement.

Creative, inspiring, aerial, FLY reveals the playful and non-conformist aspect of freeskiing. It is the instrument of its artistic dimension, from the radical shred to the spectacular flights, as comfortable on the piste as in deep snow. With a freetouring set-up, it becomes a complete ski, capable of going for the subtleties of the terrain with the strength of the legs. The movement is graceful, the mountain a playground.

Master of shred on smooth surfaces, the FLY 95 is also very comfortable on windblown snow or in powder. An extremely manoeuvrable and forgiving ski, designed for all the subtleties of the ski resorts. Both light and resistant, thanks to its poplar core, it can easily be used for ski touring to explore more distant playgrounds.

The FLY 105 is a favorite of international new schoolers such as Laurent De Martin, Sampo Vallotton and Maxime Chabloz. It allows you to go from the park to the backcountry without hesitation. The full twin rocker construction encourages you to go powder hunting and enjoy all the features of high to medium mountains.

115 ways to have backcountry fun with the FLY 115. For fans of big conditions and high flying, this freestyle weapon with a full twin rocker is a melting pot of creative expression. As for Laurent De martin, it will never stop encouraging you to use every feature and to search for the best way to embellish the mountain.

MATERIALS

Wood core

The core is literally the heart of the ski. The species' choice as well as their combination will define the first character traits of the ski. That's why we produce our own core without making any compromises. Each wood strip is carefully selected, weighed and assembled to give each model a unique character.

Composites fibers

The glass and carbon fibers are woven and then impregnated with resin. Once pressed and hardened, this combination will form a single material. Combined with the core, the fibers' choice as well as their orientation will define the mechanical properties but also the weight of the ski. For this reason, we produce our own glass and carbon fabrics adapted to each ski. This perfect mastery of composite materials is one of the key ingredients of the Movement magic.

Base

To durably guarantee the best riding sensation, our skis are all equipped with very high density sintered soles. We offer 3 P-tex soles categories which answer with precision to each type of use. All our skis are structured on the latest generation of Montana robots and then manually hot-waxed in order to properly nourish the base. Your skis are immediately ready to carve curves.

Edge

The edges are literally the link between the skier and the snow so no compromises can be made! All our edges are diamond sharpened on our Montana robots. Lightened, standards and reinforced, 4 edge thicknesses are used according to the program.

TECHNOLOGIES

Double fiber & titanal plate reinforcement

2 plates system, one in fiberglass and the other one in Titanal, entirely integrated under the bindings to ensure perfect anchoring of the screws without altering the natural flex of the ski.

Light hybrid carbon fibre

3 axis fiberglass

Stability, strength and maneuverability, the 45° oriented fiberglass will provide torsional rigidity for a good grip and a soft and reassuring touch on snow.

Hybrid carbon 2 axis

The perfect compromise between grip and maneuverability. Composed of a great mix of 45° oriented fiberglass and carbon, this technology will provide comfort and pleasure every time.

Hybrid Carbon 5 axis

An additional carbon weave oriented at 35° provides power and unmatched grip on hard snow and steep slopes.

Ultralight carbon

Pushing the limits, this is the ambition of our famous technology which combines a light weight and a perfect skiability. Many times imitated but never equaled, the secret receipt signed Movement is well kept and continues its evolution year after year while always offering better performance.

Double titanal plate

Two Titanal plates sandwich the core for uncompromised stability and power transfer. Extreme carving on freshly groomed slopes or straight line in a blank corridor, you will be the only limit.

The concretization of the movement, the design.

The design of the 22/23 collection aims for a better conjunction between technology and graphics. The lines dictate the movement and evoke the temperament of each model. Concrete art, a movement largely inspired by Swiss artists, was the natural choice to express this. Concrete art, in the form of a line, a color, a surface, gave birth to the Swiss and international style in the middle of the 20th century, based on typographic and geometric elements as the principal and structural design elements.

This natural evolution of graphics accompanied the technical progress of our skis and clearly communicates their characteristics. The contrasting opaque brilliance accentuates the visual dynamics of the coloured lines, while the transparent effects reveal the unique craftwork which will come into action under our feet, of course the ultimate goal.

This coherent design based on a non-conformist aesthetic and elegant minimalism reflects Movement's identity, technical excellence at the service of freedom in the mountains.

## THE MOVEMENT MANUFACTURE

Movement Skis is a Swiss brand whose roots go back to 1980 when three friends created the Wild Duck snowboard brand. The epic story lasts twenty years and leaves the mark of a brand, driven by the spirit of creation, that succeeds in establishing itself and prospering in North America and Japan. The rebirth of freeskiing in the late 1990s led the company to a new technological and industrial evolution with the creation of Movement Skis, in parallel with the snowboard activity.

Movement Skis was born in 2000 and found itself in front of an immense virgin mountain. Everything had to be invented. The second skiing revolution was underway, that of freeride and larger skis, better adapted to snow conditions; that of freestyle and the race for tricks and amplitude; that of touring and the parallel obsession with lightweight equipment. Strengthened by 20 years of experience in the snowboard industry, and a pioneering carving research, Movement positioned itself as an innovative brand with novel construction choices. In 2005, the acquisition of its own manufacturing plant, the AST Ski Factory, consolidated its independence. Freed from this production subordination, Movement invested in research and expanded its offer of versatile and technical skis which foretold the evolution of skiing. Twenty years after its inception, Movement Manufacture symbolizes this unique alchemy between a team, an independent research and production process, and creative vivacity.

Thanks to this control of the production chain, the creative and cheeky spirit of the early days has been able to thrive. This freedom is now reflected in the fabrication of ski touring models - «freetouring compatible» - i.e., skis that seek not only to go downhill, but also to move around the mountain independently. The ultimate goal of riding down mountain slopes remains, but we are now free to choose the movement that will take us there.

*free the movement*

## SKIBOOTS

Our skiboots range are part of our touring, high alpine touring and free touring line. A construction in order to make putting on as well as removing the boot easier. A simple closure mechanism guarantees easy handling and functional use.

Our versatility and quality goals are now reached in this sector. They have improved the boots reputation as one of the most reliable on the market.

The target customer is defined and this boot's range responds completely to the enthusiast & professional ski touring demand. For this season, a special nod to our expert customers who are looking for lightness and extreme precision with the carbon cuff.

PERFORMANCE

Lightness and performance, as the name suggests, are the substance of the PERFORMANCE program. Lightweight, thanks to its grilamid construction, and minimalist buckle and accessories. PERFORMANCE, because its precision allows for optimal control on the descent. Modernized, they are equipped with the new collar and the new ski/walk lock system.

new

- Flip-up device locking system for the ski/walk position.
- 2 positions of adjustment angle of the collar position possible.
- 2 buckles/power strap closure system

The PERFORMANCE program is proposed with 2 options of thermoformable liner adapted to the users: MOVEMENT PALAU or ULTRALON.

FREETOUR

The FREETOUR has been significantly modernized with the addition of a new 3-piece collar that allows for greater precision, especially with wide skis for freetouring use. It also benefits from a new locking system with a rocker ski/walk lever and a new, stiffer, MOVEMENT SPLIT boot on the front part. Designed for ski tourers who prioritize downhill precision, the FREETOUR is a boot which offers direct transitions, capable of performing in every type of snow condition.

new

- Flip-up device locking system for the ski/walk position.
- 2 positions of adjustment angle of the collar position possible.
- 2 buckles/power strap closure system

The FREETOUR program is proposed with 2 options of thermoformable liner adapted to the users: MOVEMENT PALAU or ULTRALON.

CARBON PRO

The CARBON PRO boot is differentiated by its carbon collar which radically stiffens the upper part of the boot while reducing the weight of the boot. Program designed for specialists looking for performance and precision without compromise, in a purely ski-mountaineering program.

new

- Flip-up device locking system for the ski/walk position.
- 2 positions of adjustment angle of the collar position possible.
- 2 buckles/power strap closure system

The CARBON PRO boot is available in a single unisex version.

The CARBON PRO program is delivered with an ultra-light PALAU thermoformable liner.

MEN

Sizes	24.5-29.5 (only half sizes)
Weight	990 gr (26.5)
Color	Black/Black/Red
Materials	Shell: Grlamid Cuff: 100% Carbon

N° REF. MOV-B-22808

The CARBON PRO program is intended for the ski mountaineering sector but is also aimed at sportsmen or professionals of high mountain skiing.

Every effort has been made to offer a high-performance, lightweight product. The carbon collar has been designed to withstand high pressure, without creating compression points. The displacement is optimized, thanks to the positioning of the collar axes. The push and pull of the foot do not cause any resistance. Closing the buckles is very easy and locking them requires a simple press on the rear lever. The whole thing can be handled without opening the trouser gaiter.

The liner is perfectly enveloping, with reinforcements on the sensitive areas. It can be thermoformed (better) or directly used. A waterproof gaiter, placed on top of the shell, guarantees a perfect water-proofness on the front and on the instep, in case of wet or deep snow.

NEW - DRYBASE

All Colltex ski skins are now coated with the newly developed «Drybase» special coating. This coating on the back of the fabric prevents water from penetrating and keeps the skins dry and light. Furthermore, this treatment creates an optimal chemical bond with the hotmelt glue. As a result, the glue adheres optimally to the back of the ski skin and it is very difficult for the glue to tear off. With this innovation, ski tourers benefit from even better performance on the mountain.

The objective of our pole collection is efficiency and reliability, whatever the use: mountaineering, freeskiing, ski touring, or alpine skiing.

High-quality materials (7075 aluminum and carbon), handles, straps and washers adapted to each practice, and always this will to innovate on the details that make all the difference on the mountain. The latest innovation in the freeskiing range is a 360-degree rotating handle with an asymmetrical strap for exceptional grip and comfort.

3TECH

new

Skiing: CE-EN 1077  
Mountaineering: CE-EN 12492  
Biking: CE-EN 1078

Size	XS-S (52-56 mm), M (56-58 mm), L (58-60mm)
Color	Black
Outer treatment	Light in molding construction 2 parts
Inside finish	Fast drying, anti-allergic, anti-bacterial material
Summer lining	XS-S 5mm, M 10mm, L 7mm (spare parts)
Winter lining	Comfort XS-S 5mm, M 8mm, L 5mm (on helmet)
Buckle	Standard clip closing system
Goggle holder	V-Elastic google strap
Ventilation	Passive
Weight	430 gr
N° REF.	MOV-C-22205

Our triple-standard multi-function helmets are approved for skiing, mountaineering, road and off-road cycling.

Materials polished to obtain a refined look, care of comfort for each use, and optimal safety, thanks to side reinforcements in ABS, inserted in sandwich on each side of the helmet. The efficient ventilation system regulates air flow during the effort.

Two interiors are provided with the helmet. A light interior for summer (cycling and mountaineering) and a lined interior for winter. A Lycra headband is also provided to resist the cold on the 3TECH ALPI.

3TECH WOMEN

new

Skiing: CE-EN 1077  
Mountaineering: CE-EN 12492  
Biking: CE-EN 1078

Size	XS-S (52-56 mm), M (56-58 mm)
Color	White
Outer treatment	Light in molding construction 2 parts
Inside finish	Fast drying, anti-allergic, anti-bacterial material
Summer lining	XS-S 5mm, M 10mm (spare parts)
Winter lining	Comfort XS-S 5mm, M 8mm (on helmet)
Buckle	Standard clip closing system
Goggle holder	V-Elastic google strap
Ventilation	Passive
Weight	430 gr
N° REF.	MOV-C-22204

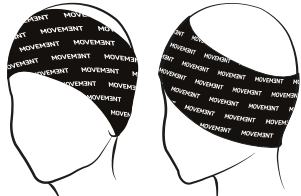

**3TECH LINE**  
The 3TECH version is built on the same base and the same volumes as the classic ALPI model but benefits from a very comfortable lining, with 2 removable inserts to close the ventilations if the conditions are too cold.

**3TECH ALPI LINE**  
Real Swiss Army knives of protection, the 3TECH ALPI ranges are designed on a lightness/minimal volume factor, which allows to vary the sports with an ideal support and comfort. Each season has its own helmet, each sport its own helmet.

3TECH ALPI Honeycomb

new

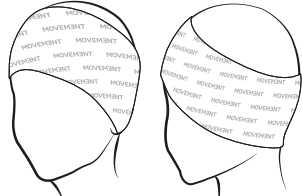

Skiing: CE-EN 1077  
Mountaineering: CE-EN 12492  
Biking: CE-EN 1078

All guarantee claims concerning our product must be made directly at a Movement retailer. All Movement skis as well as Movement accessories are guaranteed against manufacturing defects for two years from the date of purchase.

The shipping costs of a warranty claim is entirely at the discretion of the store. Any modification made to a Movement product other than the initial mounting of the ski binding will fully void this guarantee. After examining the product, Movement will repair or replace the defective product. The following are a few examples which are not covered under this warranty:

- Damage caused by a normal wear and tear [such as: scratches caused by crossing the skis, discoloration of the ski caused by the sun,...].
- Damage caused by shocks or by impacts with other objects [tree roots, rocks, rails,...].
- Damage caused by inappropriate maintenance and use of the product [damage to the ski or the breaking away of the bindings, caused by improper use, such as skiing with blocked insert bindings as well as all other damage cause by abnormal use or negligence].
- Damage caused using any telemark binding [normal as well as touring telemark bindings] on all our touring skis. Any damage to the ski using his binding is not covered.

The invoice as well as the warranty completed by the retailer are required documents to validate the warranty claim. Please to bring these documents to the retailer with the defective product.

Movement wishes you a great winter season. Enjoy it!
